GoWesty Stainless Steel Coolant Pipe Kit

This new and improved stainless steel coolant pipe kit is a GoWesty exclusive. It will replace the standard long coolant pipes *and* the hard to find 251-121-062E hose (the big hose over the transaxle that connects the thermostat housing to the rear end of the inboard coolant pipe).

Kit includes:

- Stainless pipes (4 pieces)
- Formed hose
- Straight hoses (2 pieces)
- Hose clamps (4)

One of the stainless pipes now mimics the curvature of the 251-121-062E hose.

The formed hose included in the kit will “finish” connecting that stainless steel pipe to the thermostat housing.

Use the provided hose clamps and the straight hoses to couple the stainless steel pipes.

Note: Spring clamps are pictured, but screw-type clamps are included with the kit.
