**GVW-113-301-123A**

**EXTERNAL HEX TRANSMISSION FILL PLUG W/ PORT FOR TEMPERATURE SENDER FOR VANAGON**

---

**Installation Notes:**

- This kit replaces the original internal hex transmission fill plug in your Vanagon with a 19mm external hex plug, which allows for the removal of the fill plug without a special internal hex tool.
- If you are NOT using a temperature sender (available separately), you will need to install the provided 1/8" NPT plug into the temperature port on the top of the fill plug.
- The 1/8" NPT plug has sealant applied to the male threads to prevent leaks.
- Using a 3/16" internal hex (Allen key), tighten the small plug 3/4 to 1-3/4 turns *past* finger tight. It may be necessary to hold the fill plug with a 19mm box-end wrench or place it in a vise to properly tighten the temperature port plug.
