REMOVAL OF FACTORY PEDAL SWITCH(ES)

Start by removing the brake and clutch switches from the vehicle. If you have an automatic transmission, you will only be removing a brake switch.

The factory redundant and often problem-plagued vacuum safety cutoff will also need to be disabled. The GoWesty cruise cut-off switches only use the more reliable electrical cut-off.

Locate the cruise control vacuum pump located in the engine bay near the passenger side tail light. Remove the vacuum T pictured in the diagram to the right. Replace the hoses that run between the vacuum pump and the vacuum actuator on top of the engine (labeled 20 in the diagram to the right) with the single length of vacuum hose included in this kit. The hose that runs to the brake/clutch switch(es) (labeled 25 in the diagram to the right) will be left unconnected. Remove or tie this hose up out of the way.
PEDAL SWITCH MOUNTING
If you have an automatic transmission, your kit will only include a brake switch. The brake switch should mount above the brake as shown in the picture to the right. There should be two factory-drilled holes in the metal lip above the brake onto which your switch bracket will mount. Align the bracket so that the switch comes in contact with the brake pedal shaft when the pedal is in the up position. Attach the bracket using the supplied screws. The bracket may need to be bent up or down slightly with a pair of pliers to fine tune the positioning so that the switch closes only when the brake is in the up position. Adjust the switch so it clicks off just as you step on the pedal.

If you have a manual transmission, the clutch switch will be installed in the same manner as the brake switch.

WIRING THE PEDAL SWITCH(ES)
The connector for the factory pedal switch will need to be cut off and discarded. Included in the kit is a connector with two protruding black wires. Use the included butt connectors and shrink tubing to connect each of these wires to the BLACK/RED wires that ran to the factory cruise switch. It does not matter which black wire mates with which factory BLACK/RED wire.
